

BACKGROUND

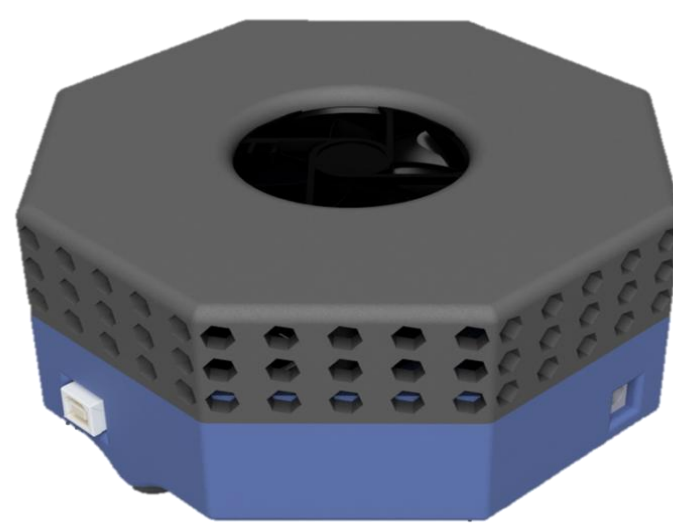

Average annual PM 2.5 concentrations in Bangladesh were 66 micrograms per cubic meter in 2022 which is 13.2 times higher than the WHO exposure guidelines.

- Worldwide Crisis
- Limited Solutions
- Caused by the presence of toxic compounds in the atmosphere.
- Harms the wellness of habitants
- Hazardous to the ecosystem or objects

PROTOTYPE

IoT Based Air Purifier

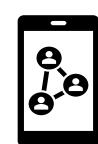

IoT Based Air Monitoring Device

OBJECTIVES

Detects Temperature, Humidity, PM1.0, PM2.5, PM10, CO2, CO, VOCs level

Remote Monitoring of Indoor and Outdoor

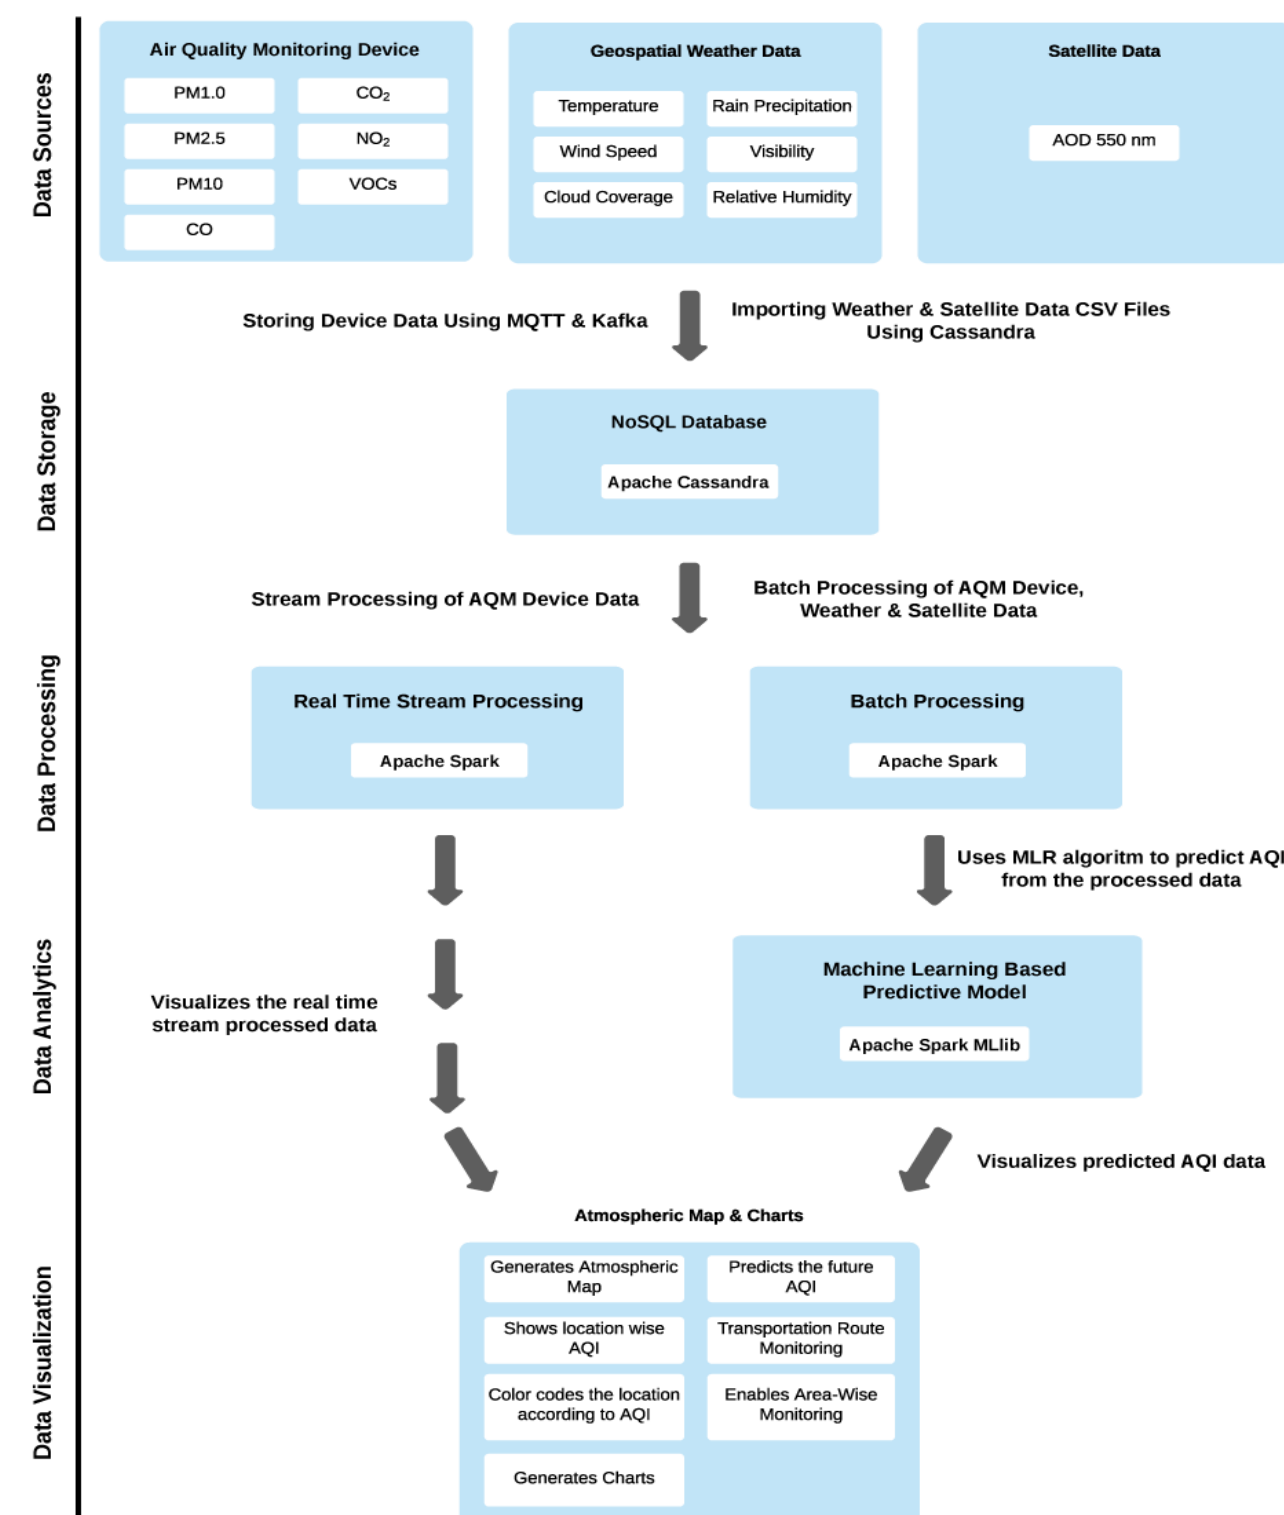

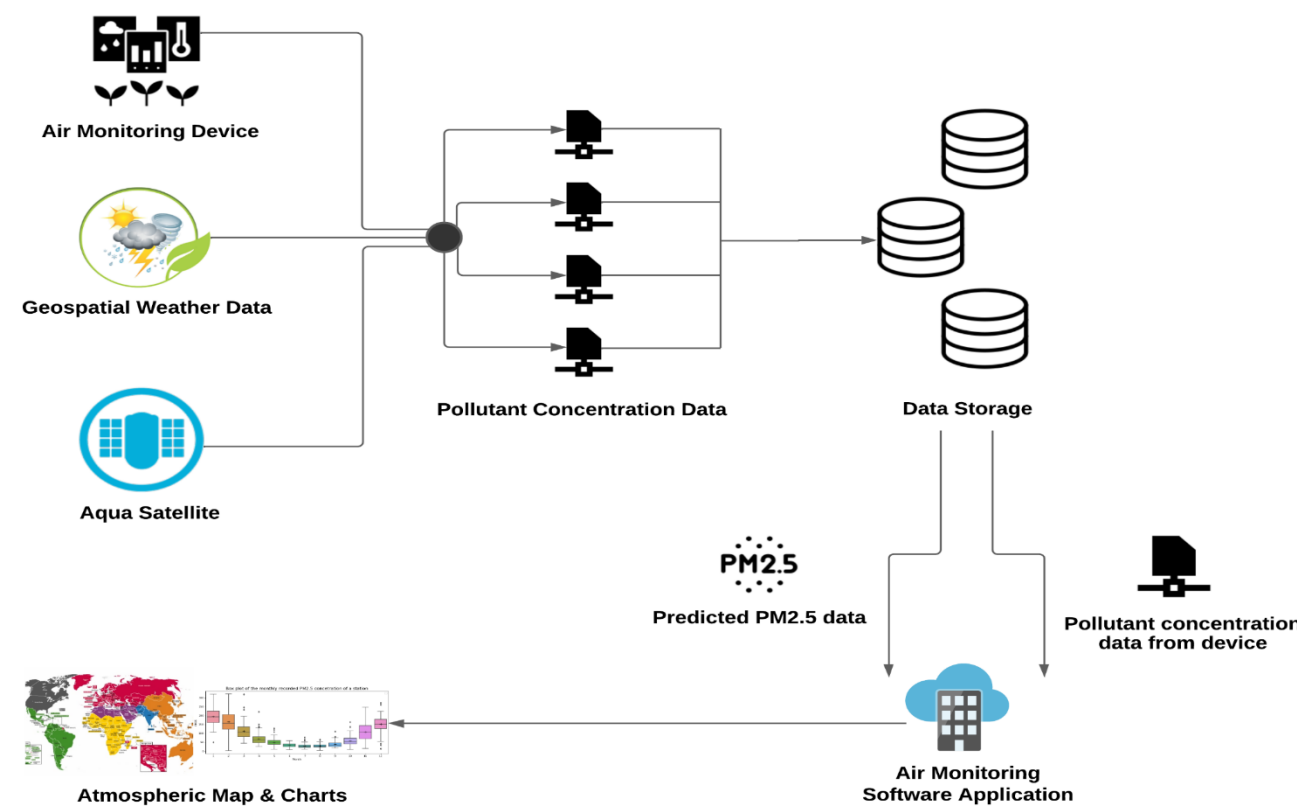

Affordable

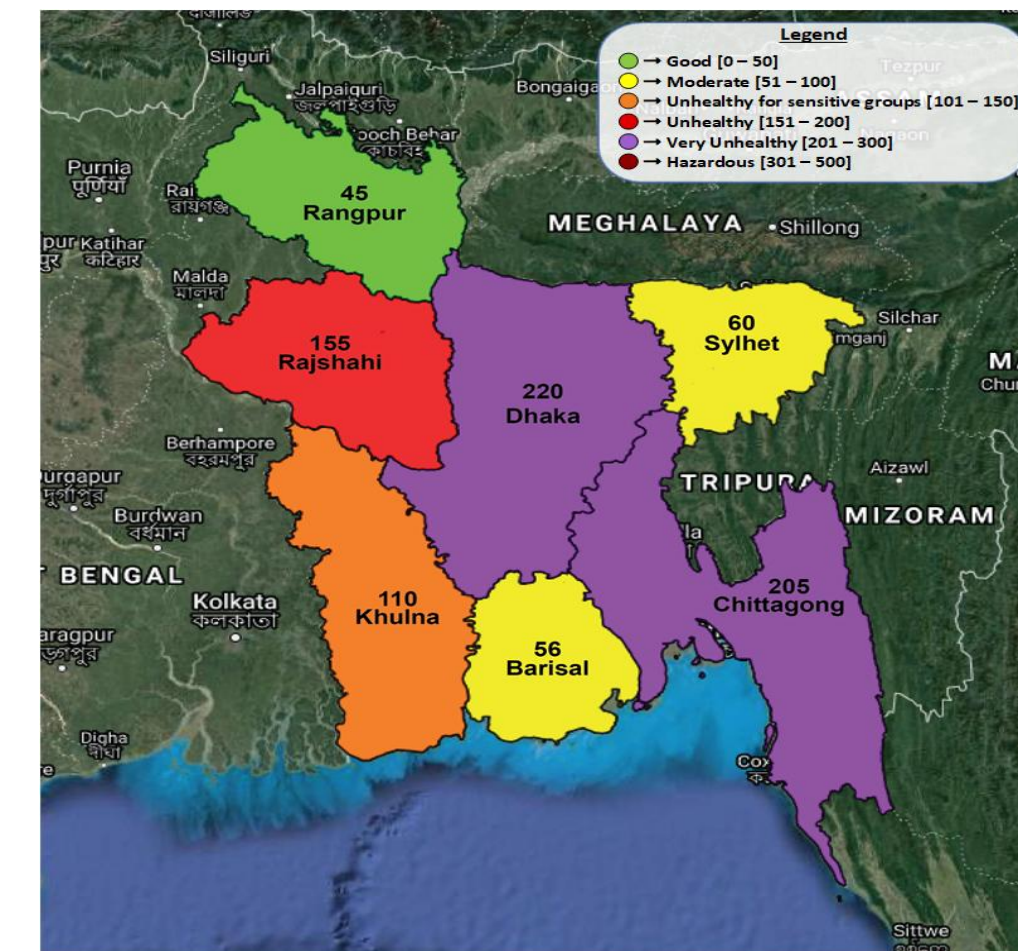

Ensures Healthy Indoor Air Quality

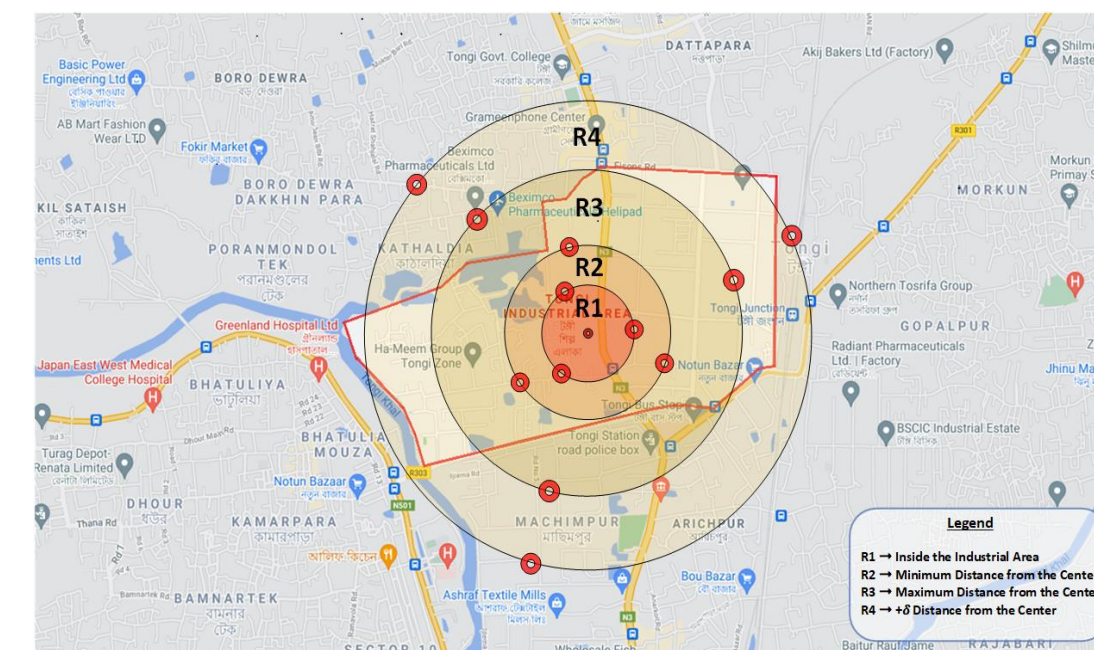

METHODOLOGY

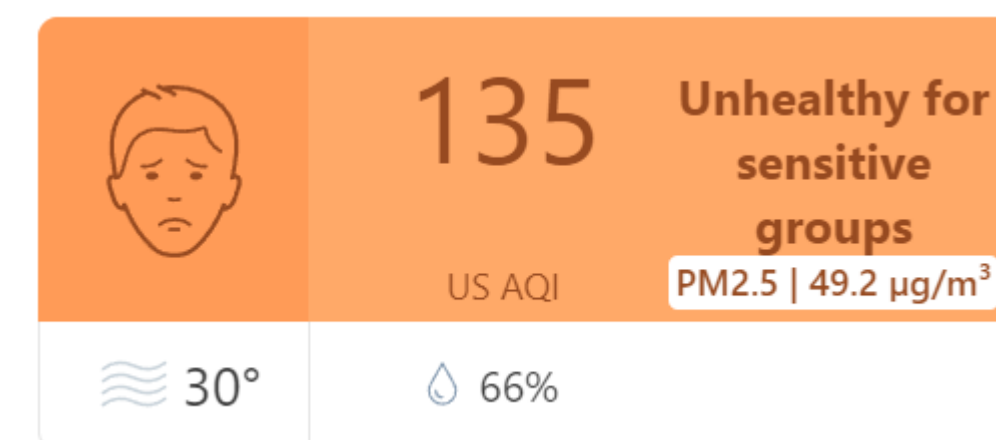

APPLICATION USER INTERFACE

Overall Monitoring of Bangladesh

Industrial Area Monitoring

Indoor Air Quality Status
